

House Price Prediction Using Linear Regression

Elugam Bharath Sai

AI&ML Task1

Objective

- Predict house price using California housing dataset
- Learn ML workflow

Data loading

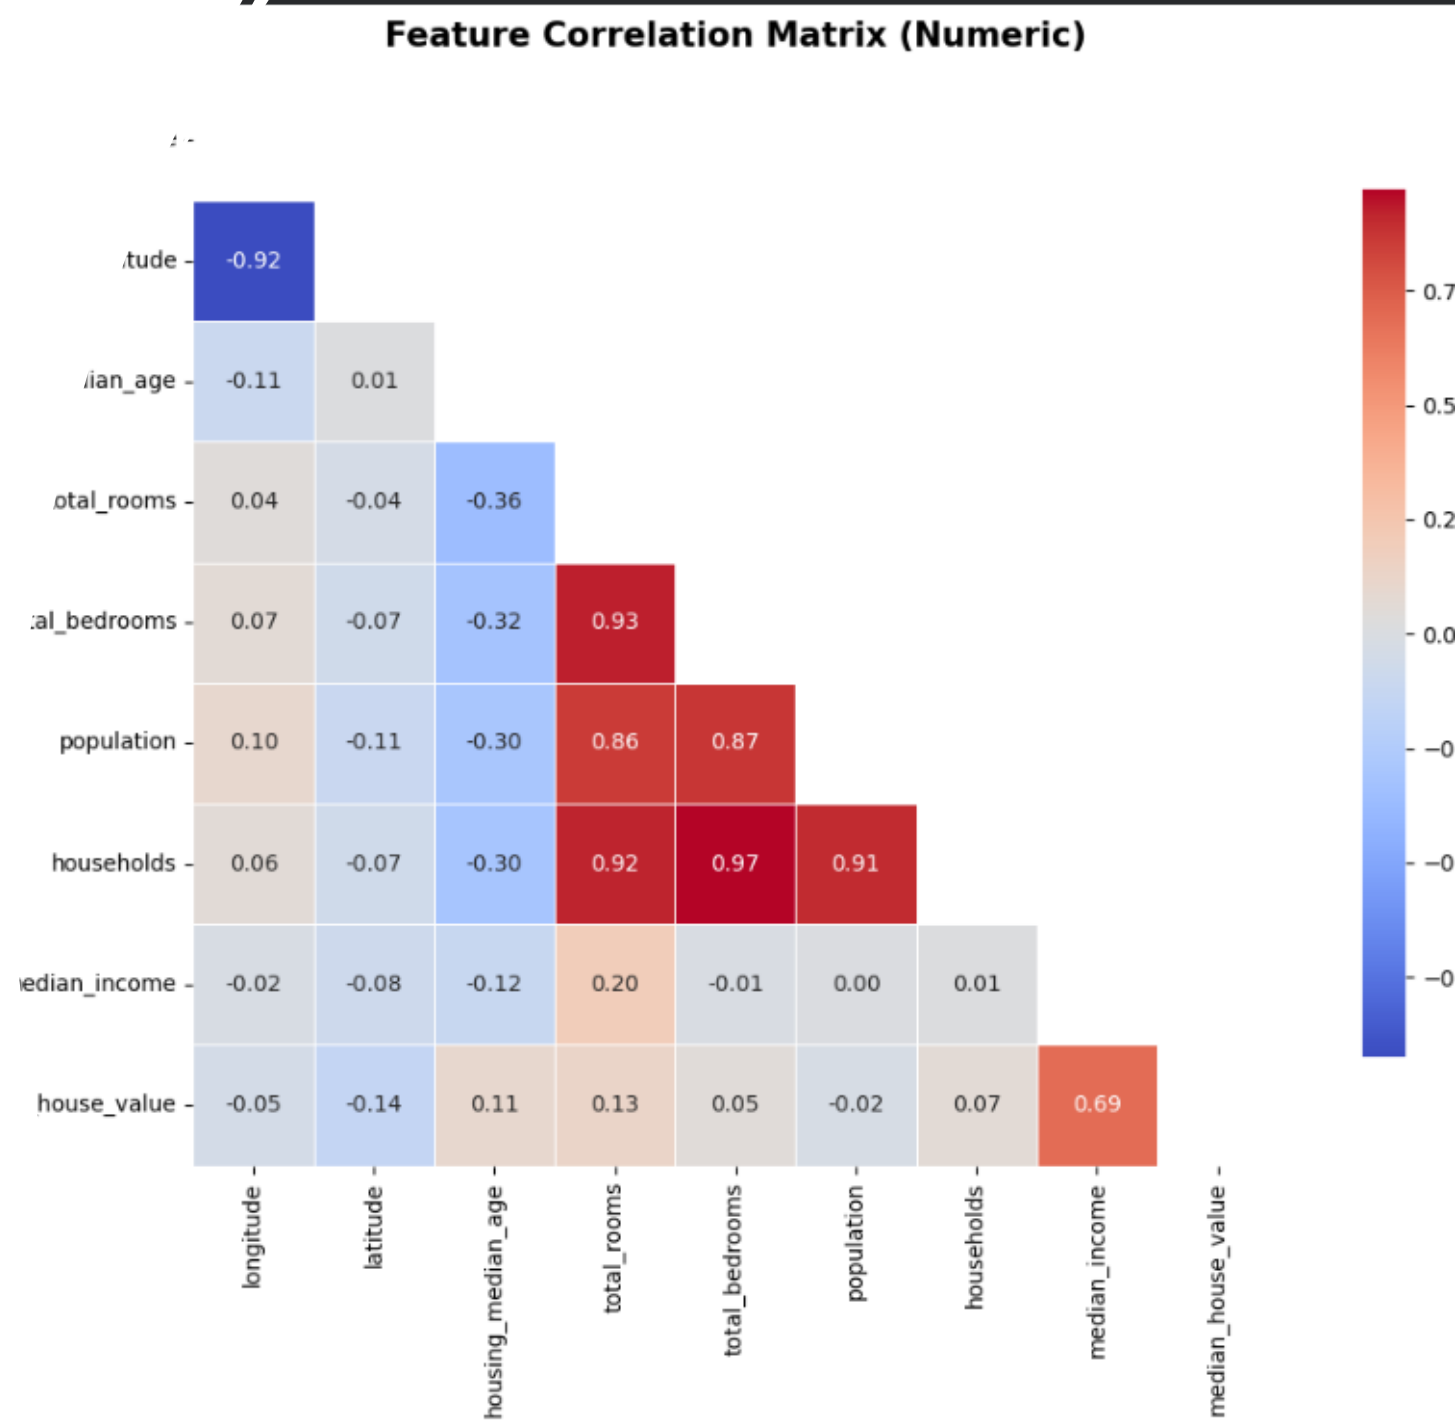

Training

Testing

Evaluation

Dataset & EDA

- Dataset: California Housing
- Checked:
 - Missing values
 - Correlation
 - Data distribution

Model Results

--- TRAIN SET ---

MAE : \$ 50,627

RMSE : \$ 69,361

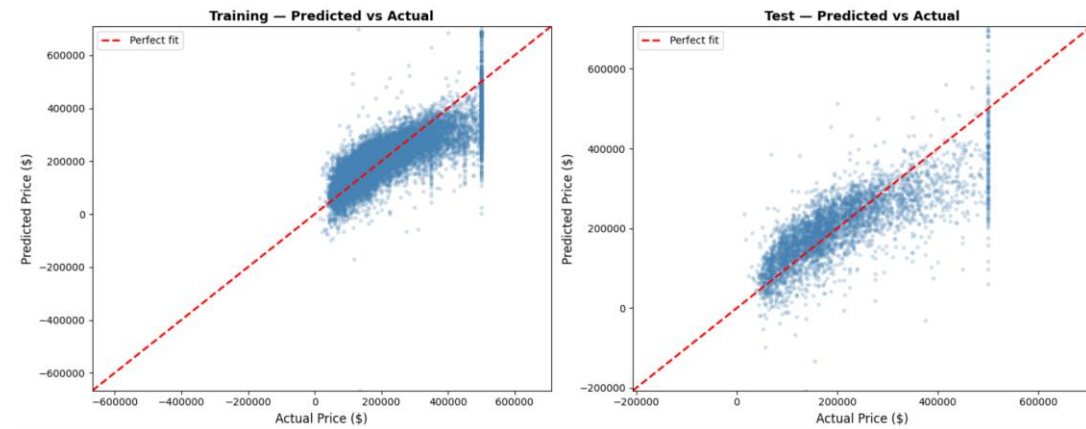

R^2 : 0.6401

--- TEST SET ---

MAE : \$ 51,821

RMSE : \$ 71,148

R^2 : 0.6137

Conclusion

The Linear Regression model was successfully trained on the California Housing dataset to predict house prices. The model showed good performance and helped understand how different housing features affect price prediction. This project demonstrated the complete machine learning workflow, including data preprocessing, model training, evaluation, and result visualization.
